Sampling Methodology in Finite Populations (Statistics 5201)

Zack W. Almquist
Fall Semester, 2015

Class Schedule

Lecture: M/W/F 12:20 – 01:10 pm Rapson Hall 54
URL: http://moodle.umn.edu
Note: Requires UMN login and registration in class to access.
URL: http://www.github.com
Note: Requires github login.

Professor

Name: Zack W. Almquist
Office: 372 Ford Hall
Office Hours: Friday 2:00-3:00PM
Email: almquist@umn.edu
Telephone: 612-624-4300 (not recommended)

Teaching Assistant

Name: Megan Heyman
Office: 350 Ford Hall
Office Hours: Tuesday 9-11
Email: heyma029@umn.edu

Course Objectives

This course will focus on traditional sampling methods employed on finite populations, including simple random, systematic, stratified, cluster, and unequal probability sampling. Further, it will expose the student to ratio and model based estimation in the context of finite population sampling. Additional topics covered include Bayesian sampling and Network sampling.
Prerequisites

It is assumed that the student has taken an introduction sequence to statistics such as 3011/3021, 3022, introduction to statistical analysis and data analysis, or a mathematical statistics sequence equivalent to 4101/4102, 5021 or 50101/5102. This includes, but is not limited to, basic familiarity with probability distributions, hypothesis testing, and linear models. While not required it is highly beneficial to have some familiarity with the R statistical platform.

Course Requirements

Computers

It is not required that students bring their computers/laptops to lecture and lab (if one is owned), but it is highly recommended since both lecture and lab will make extensive use of the computer software R. Computer labs are available on campus, please consult with the TA if you have trouble finding the various locations of campus computer labs.

Readings

Weekly readings assignments can be found on the course syllabus. All readings are assumed to be completed before each lecture/seminar. You are expected to read over the class notes each week and make sure you are familiar with the material as the course progresses. Questions are encouraged.

Homework

Homework assignments will normally be administered on a bi-weekly basis and will be due on every other Wednesday. Homework assignments are meant to achieve three results: (1) provide practice with the statistical concepts discussed in class, and (2) provide practice with the computational and statistical programming language R and (3) provide a chance to demonstrate your mastery of material and highlight areas where more work is needed. You may work in a group, but all write-ups must be done independently. All collaborators should be appropriately cited in your write up and any detailed R code should also be provided.

Exams

To assess mastery of course material, two exams will be administered over the course of the semester. The first will be an in-class exam, and the second will be a take-home exam provided in the last week of instruction. The examinations will cover all material presented
in lecture and assigned readings. Students are advised to keep up-to-date on reading assignments, and to attend lectures regularly, so as to be prepared for exams. Students must be present for the exam to obtain credit; exams are not rescheduled due to travel or other considerations. Note that dictionaries or other language aids may not be used when taking an exam (see English proficiency, under Prerequisites).

No calculators or phones will be allowed. A cheat sheet will be allowed, but is limited to one 8 by 11 inch piece of paper (e.g., notebook paper or printer paper).

**Participation**

Individuals are expected to attend every course, to have completed every reading, and to participate with questions and discussion on each topic as presented. If you plan on missing any class period you are responsible for all material and for contacting the instructor in a timely manner.

**Grading**

- Participation: 5%
- Labs: 10%
- Homework: 25%
- Exam 1: 30%
- Exam 2: 30%

Lectures, readings, labs, and review sessions are provided for each student’s benefit. It is the responsibility of the student to take advantage of these opportunities to acquire and demonstrate mastery of course material, so as to achieve his or her desired grade.

**Letter grade assignment**

- A 93%+
- A- 90-92.99%
- B+ 87-89.99%
- B 83-86.99%
- B- 80-82.99%
- C+ 77-79.99%
- C 73-76.99%
- C- 70-72.99%
- D 60-69.99%
- F <59.99%
Required Texts

Recommended Resources and Books for R and Statistics

Readings

Be prepared to discuss all readings assigned at anytime in lecture/seminar.

Required Software

We will be using the R statistical programming language. R can be downloaded at [http://www.r-project.org/](http://www.r-project.org/).

RStudio IDE (Integrated Development Environment) is a software application which facilitates interaction with the R statistical programming language. It is often preferred to the GUI (Graphic User Interface) made available through CRAN. You can download it at [http://www.rstudio.com/](http://www.rstudio.com/).

Latex is a word processor and a document markup language. It can be downloaded and installed on Windows ([http://miktex.org/](http://miktex.org/)), OSX ([https://tug.org/mactex/](https://tug.org/mactex/)) or Linux (use the package manager of your choice).

A github account will be required of all students. One can register for a github account at [https://github.com/](https://github.com/). You can find information about how github works with Rstudio at [http://z.umn.edu/rstudiogit](http://z.umn.edu/rstudiogit), and github maintains a quite good help-system at [https://help.github.com/](https://help.github.com/).

Course Policies

Missing Class, etc.

It is expected that each member of the class will attend every lecture/discussion. If there is an appropriate reason to miss class it is expected that the individual will email or discuss in person with the instructor at least one week in advance. For any medical issues please see the UMN website for university policies.
Cheating, etc.

All work is assumed to be your own and all individuals are expected to follow the university policy on cheating and misconduct. If you have any questions please consult the UMN website for university policies.

Assignments

Homework Assignments

Homework will be assigned on a biweekly basis starting on the second Wednesday of the Semester and will be due two weeks later at 5:00pm. There will be a total of six homework assignments. Homework assignments will be graded on a 100 point basis. Each assignment must be turned in through github, no late assignments will be accepted. Homework must be turned in using github, knitr/latex and must include all R code. Your lowest score will be dropped in the final calculation of grades.

Lab Assignments

There will be occasional R lab assignments throughout the Semester. These assignments are to facilitate your experience and learning with the R statistical programming language. All lab assignments will be graded based on completion and due one week after being handed out. All labs must be turned in using github. Your lowest lab score will be dropped.

Exams

• *In Class Exam:*
  – 11/13/2015

• *Take Home Exam:*
  – Handed Out: 12/16/2015
  – Due: 12/20/2015 by 5:00pm

Reading Assignments

Week 1 (09/07–09/11/15): Introduction and Review

• *Readings:*
  – Chapter 1
Week 2 (09/14–09/18/15): Simple Random Sampling
  • Readings:
    – Chapters 2.1-2.3

Week 3 (09/21–09/25/15): SRS Weights, CI and Sample Size Estimation
  • Readings:
    – Chapters 2.4-2.6

Week 4 (09/28–10/02/15): Randomization Theory and Prediction
  • Readings:
    – Chapters 2.8-2.9

Week 5 (10/05–10/09/15): Stratified Sampling
  • Readings:
    – Chapter 3.1-3.2

Week 6 (10/12–10/16/15): Stratified Sampling
  • Readings:
    – Chapter 3.3-3.4

Week 7 (10/19–10/23/15): Stratified Sampling
  • Readings:
    – Chapter 3.5-3.7

Week 8 (10/26–10/30/15): Ratio and Regression Estimation
  • Readings:
    – Chapter 4.1-4.4

Week 9 (11/02–11/06/15): Ratio and Regression Estimation
  • Readings:
    – Chapter 4.5-4.6
Week 10 (11/09–11/13/15): Review and Exam
  • Readings:
    – Review Chapters 1-4

Week 11 (11/16–11/20/15): Cluster Sampling with Equal Probabilities
  • Readings:
    – Chapter 5

  [Thanksgiving]
  • Readings:
    – Chapter 6

Week 13 (11/30–12/04/15): Advanced Topics - Network Sampling
  • Readings:
    – Handout on Network Sampling

Week 14 (12/07–12/11/15): Advanced Topics - Bayesian Sampling
  • Readings:
    – Handout on Bayesian Sampling

Week 15 (12/14–12/18/15): Review
  • Readings:
    – Chapters 1-6, Network Sampling, and Bayesian Sampling Handouts
