

Case Study 6*for March 4*

The Minnesota Pollution Control Agency has a state-wide volunteer program for measuring the clarity of streams around the state. Volunteers measure the clarity throughout the year by collecting water in a tube and noting how far down the tube they can see. Sometimes the tube isn't long enough, so the data is censored. Additionally, they got longer tubes about five years ago, so the censoring used to be at 60cm but is now at 100cm. The number of measurements varies both by the volunteer and by the year. The clarity is known to vary by season (spring/summer/fall) and also by stage (how high the water level is: low/normal/high). Most of the volunteers have been doing this for at least five years, and some as long as forty years! (The program started in 1971).

The agency wants to make individual reports for each volunteer to show them how the clarity in their stream has changed (or not) over the time they have been measuring it. They'd like to do some sort of statistical inference to test if there is a trend, and if so, how large it might be. They'd also like to report how each stream compares with others in the same watershed, and test if there is an overall trend in the watershed. Finally, they'd like to make some nice plots to include in the report to graphically show how the clarity has changed (or not).

- What methods of inference could you use for investigating trends in individual streams? How would you report the results in a way the public would understand?
- What methods of inference could you use for investigating overall trends in the various watersheds? Again, how would you report the results in a way the public would understand?
- What kinds of graphical displays might you suggest for their reports?

Group 1:

Name	Email
Mark Albrecht	albre116
Jeff Jones	jone1087
Sen Yuan	yuan0066
Ying Zheng	zheng110
Feng Yi	yixxx064
Songxuan Shen	shenx176
Xiaopei Wang	wang1164
Yiping Yuan	yuan0076

Group 2:

Name	Email
Christine Oehlert	oehl0010
Christina Knudson	knud0158
Andy Johnson	joh03017
Stacy Orlett	moel0046
Jeff Clobes	clobe017
Steve Nydick	nydic001
Ben Sherwood	sher0422
Brad Price	price412

Group 3:

Name	Email
Andrea Olson	olso1925
Ann Pang	pangx044
Pat Zimmerman	zimme450
Qian Chen	chen2291
Martin Bezener	beze0028
Bo Ra Lee	leex4919
Yunzhang Zhu	zhuxx351

The chair for this week is Andy Johnson.
